

## **BioPharma Scientific New NanoEPA<sup>DHA</sup>, Fish Oil with Vitamins D<sub>3</sub> and E Complex**

*Latest addition to “The SuperFood Solution™, Lifelong Wellness Made Easy”*

August 15, 2010 (San Diego). BioPharma Scientific announced this month the launch of **New NanoEPA<sup>DHA</sup>, Fish Oil with Vitamins D<sub>3</sub> and E Complex**, the latest addition to their “The SuperFood Solution™” line.

NanoEPA<sup>DHA</sup> is the purest, most complete, absorbable and incredibly delicious alternative to fish oil pills. The secret behind NanoEPA<sup>DHA</sup>'s exceptionally smooth and extremely pleasant taste is *emulsification*, one of the several SuperSorb® Enhanced Delivery Systems BioPharma Scientific employs. Emulsification is a process that breaks down the nutrient oils into very small droplets, which allows all the ingredients to stay blended together. Emulsification helps create the **delightful lemon meringue taste experience**, completely free of fishy taste or after taste, while also providing a smooth creamy texture, instead of an oily one. ***You won't believe its fish oil!***

### **And 300% More Absorbable!**

Even better, by breaking down the fish oil and vitamins D & E into very tiny droplets, the absorption, and therefore the health benefits, may be increased by up to 300%. That means that just one teaspoon of NanoEPA<sup>DHA</sup> can provide **as much benefits as 3 standard fish oil pills** *plus* the added benefits of emulsified vitamins D<sub>3</sub> and the complete vitamin E complex (all four tocopherols and tocotrienols)!

**New NanoEPA<sup>DHA</sup>, Fish Oil with Vitamins D<sub>3</sub> and E Complex** is available through qualified health professionals only. As one has to taste the difference to believe it, BioPharma Scientific, whose slogan is “*Better Taste ~ Better Science*”, provides free taste test samples upon request by calling **1-877-772-4362** or by email at [www.superfoodsolution.com/free](http://www.superfoodsolution.com/free).
